

# Preliminary square-grid phase diagram

$L = 64$ ,  $\chi = 200$ ,  $n = 0.9375$ ,  $t_{\perp}/t = 0.1$  | raw MF updates; reciprocal 95% / 5% seeds

● S: stripe CDW / SDW    ■ D: d-wave-like paired basin

Updated September 16: both  $V=0$  anchor lineages now have negligible pairing.

**Labels describe the two observed trajectories. All 18 endpoints remain formally unaccepted.**

No interpolated boundary or converged ground-state energy ranking.

14 starts: 40 updates each; anchors: 80 / 80 at  $V=-0.4$  and 100 / 82 at  $V=0$ .
