

Bare-ladder cuts near the square-array boundary | $U/t = 8, L = 64, n = 0.9375, \chi = 1000$

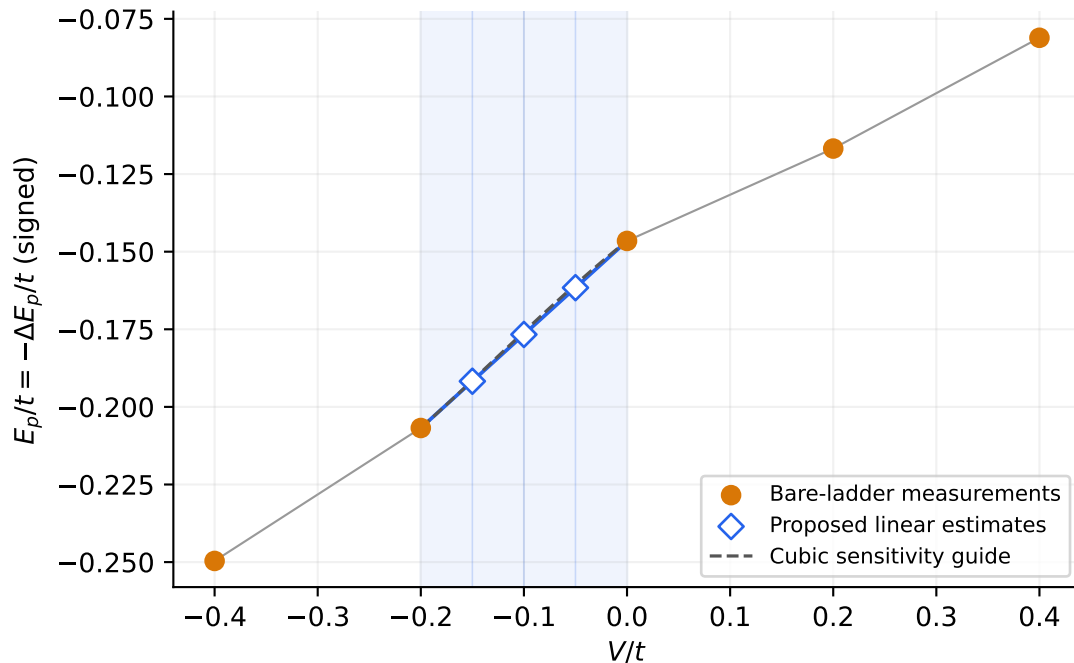

Bare ground-state energy; $t_0/t = 1.4$

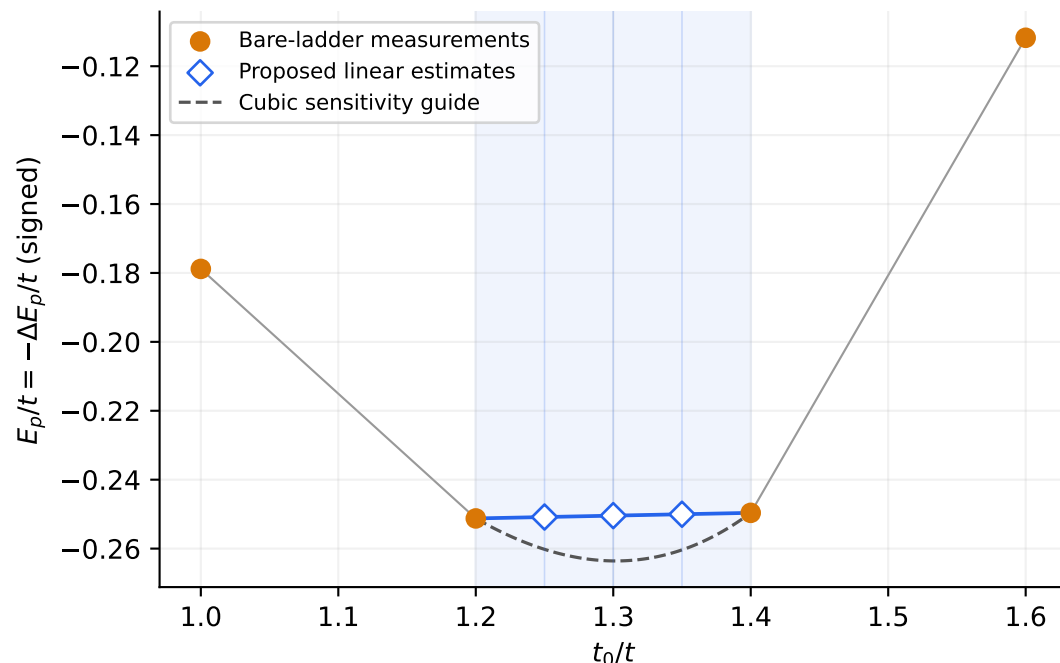

Bare ground-state energy; $V/t = -0.4$

Bare pair binding; $t_0/t = 1.4$

Bare pair binding; $V/t = -0.4$

Shading marks each finer-cut interval. No bare-ladder measurements exist at the six new points. The cubic guide tests interpolation shape; it is not measured data or an uncertainty bound.
