

Stripe amplitude versus pair correlations across saved parameters

Each mark is one spatial MPS; seeds and A/B ladders remain separate (overlapping marks are retained).

● $t_0 = 1$ ■ $t_0 = 1.2$ ▲ $t_0 = 1.25$ ◆ $t_0 = 1.3$ ▼ $t_0 = 1.35$ + $t_0 = 1.4$ ○ Outer ring: accepted

Full: $|\langle D_i^\dagger D_j \rangle|$ Connected: $|\langle D_i^\dagger D_j \rangle - \langle D_i \rangle^* \langle D_j \rangle|$ D : unnormalized rung singlet

Common bulk: rungs 9-56; $L=64$, $\chi=200$, $U=8$, target $n=15/16$. Long-distance axes are logarithmic.

58 unaccepted endpoints + 8 accepted square A/B MPSs. Parameter associations; tiny tails have no independent error bound.
