

Preliminary square-grid phase diagram

$L = 64$, $\chi = 200$, $n = 0.9375$, $t_{\perp}/t = 0.1$ | raw MF updates; reciprocal 95% / 5% seeds

● S: stripe CDW / SDW ■ D: d-wave-like paired basin

S*: stripe start has negligible pairing; pairing start is still evolving toward stripes.

Labels describe the two observed trajectories. All 18 endpoints remain formally unaccepted.

No interpolated boundary or converged ground-state energy ranking.

14 starts: 40 updates each; anchors: 80 / 80 at $V=-0.4$ and 80 / 62 at $V=0$.
