

Preliminary cubic-unfrustrated phase diagram

$L = 64$, $\chi = 200$, $n = 0.9375$, $t_{\perp}/t = 0.1$ | reciprocal 95% / 5% seeds

S: stripe CDW / SDW; negligible pairing

Both square paired coordinates also reach stripes here: (1.4,-0.4) and (1.4,-0.2).

All 18 endpoints remain formally unaccepted; these are observed basin assignments.

60 raw evaluations per start. No Anderson, interpolated boundary or energetic winner.
